Amendments to the specification

Please amend the Abstract as follows:

2 An optical spectrometer uses a tapered Fabry-Perot type ~~linear~~ variable optical filter in conjunction with an optical detector array. The filter can be a long-pass, short-pass, or narrow bandpass filter. The stability of the variable optical filter allows high resolution, depending on the number and spacing of the detectors used. In a further embodiment, signal-processing techniques are used to enhance the resolution of the spectrometer beyond the measured response.
